EDUCATION

University of Colorado Boulder **Expected May 2028**
B.S. Computer Science - ABET-Accredited Program *Boulder, CO*

COURSEWORK / SKILLS

- Data Structures
- Computer Systems
- Database Systems
- Software Development Methods
- Object-Oriented Analysis and Design
- Algorithms
- Principles of Programming Languages
- Intro to Cybersecurity
- Intro to Robotics
- Generative AI

TECHNICAL SKILLS

Languages: TypeScript, Python, Java, C++, JavaScript, SQL, HTML, CSS

Frameworks/Libraries: Node.js, Express, Hono, Bootstrap

Cloud/Tools: Claude Code, Cursor, Google Cloud Run, Git, GitHub, GitHub Actions, VS Code, Docker, Postman,

Databases: PostgreSQL (Row-Level Security), MySQL

Other Skills: RESTful APIs, GraphQL, Multi-Tenant Data Isolation, PII-Sanitization Pipelines, Harness Engineering

EXPERIENCE

Protocol Wealth LLC **May 2026 – Aug 2026**
Software Engineering Contractor (Paid) *Remote*

- Built 12 AI-assisted financial planning tools, a streaming chat interface, a digital-asset wallet connector, and a portfolio risk view for a TypeScript wealth-management platform (Hono, Google Cloud Run).
- Designed multi-tenant PostgreSQL schemas with Row-Level Security and integrated market-data and on-chain APIs, including Ethereum/Base GraphQL subgraphs.
- Root-caused a protocol-level bug where a GraphQL integration silently failed behind an HTTP 200 response, then fixed the handling.
- Independently added 28 unit tests and 7 upstream-error tests and wired them into CI.

Stanford Golf Camp **Jun 2025**
Camp Counselor *Stanford, CA*

- Supervised 10 campers daily while enforcing safety guidelines in a high-energy environment.

PROJECTS

College Fantasy Football | React, TypeScript, WebSockets, FastAPI, ESPN API **Jun 2026 – Present**

- Owned the frontend (2-developer team) for a full-stack fantasy football platform, building the live draft room with a WebSocket-driven board, pick grid, and real-time chat.
- Built a cross-league Gameday dashboard aggregating live scores by polling ESPN's game-summary API per league, with conference filtering.
- Repository

InternshipTrack | Python, Playwright, FastAPI, Telegram Bot API **Jun 2026**

- Built a Python scraper covering multiple company career sites to track internship updates, using Playwright for JS-rendered pages and a shared Greenhouse-API path for ATS-standard listings.
- Automated the pipeline with a scheduled job (launchd) and Telegram bot alerts on new matches, plus a FastAPI web UI and a test suite for reachability and output validation.
- Repository

BudgetBites | Node.js, Express, CSS, HTML, PostgreSQL, Regex, Render **Nov 2025**

- Developed a full-stack meal planning web application to help users discover recipes and manage grocery planning efficiently.
- Integrated the Spoonacular API to enable ingredient-based recipe search and a grocery list generator that aggregates ingredients, groups items by aisle, and estimates total cost.
- Repository

Dungeon Pathfinder | C++, Data Structures, Algorithms **Apr 2025**

- Built a dungeon navigation system to compute shortest paths using Dijkstra's algorithm.
- Implemented custom heap and hash table structures to optimize priority queue performance.
- Modeled dungeon layouts using adjacency lists to support efficient graph traversal. | Repository
